# NOW YOU'RE IN CONTROL

## What is a DropsA USA Controller System?

A controller is the core of any lubrication system. It activates and monitors the lubrication cycle. A DropsA controller takes this process and makes it much more efficient, simple and reliable. We personalize each controller's functions to cater to the individual customer's application. With the presence of a high quality touchscreen available in multiple sizes, our controllers are able to provide many functions, including electric motors, electric reversing valves, low level/high level switches, oil heaters with thermostats and clogged oil filter switches. Options for oil or air pressure transducers, analog feedback cards, real-time data collection and electric shut-off valves are also available. Our controllers can actively control reversing valves, verify pressure and shut off or open oil flow to specific stands.

- ✓ **Color touchscreen interface:**
  - Available in 3", 6" or 12"
  - Analog or digital feedback
- ✓ **Fault announcements and setting control can be local or pushed to the customer's Scadea system.**
- ✓ **Options are catered to customer specifications**
- ✓ **DropsA can provide installation and assistance in start up.**
- ✓ **Our controllers are either TIME or EVENT based.**
- ✓ **Systems can be either stand-alone or separated and controlled individually.**
- ✓ **High voltage motors, air pumps and other supply systems are able to be used with our controllers.**

Controller mounts directly to Sumo Pump
